

Project 1 : Printing Receipt

Welcome to your first project! We'll be creating a very basic receipt printing program. For this week, as we've learned about variables, operators, and string manipulation, we'll be using these skills in order to create this program.

Final Design

It's always good to picture the design of what you're trying to build. For larger projects, you'll want to create a flow chart or some sort of design document that will keep you on track. This way you don't sway from the intended result. For us, we'll be building a small receipt printing program with the concepts we've learned, in which the output will look like
